

## Genesis

Genesis reinterprets an ancient limestone from Dorset, Portland stone, which, having traversed geological eras and retained its character, creates environments with a warm and elegant look. Buckingham Palace, Westminster Abbey, and the United Nations headquarters in New York are adorned with this material. Four colors, ranging from white to gray, are presented in two cutting orientations of the quarry blocks: Cross, a cloudy effect rich in details, and Vein, striated and bold. Additionally, the D-Line decoration, which accentuates the veining, completes the range. Three finishes - Soft, Mat, and Outdoor - meet every design requirement.
